

FILTER BY FORM IN ACCESS

The screenshot displays the Microsoft Access 2007 interface for a database named 'COMPANY-RIVERS'. The 'Filter by Form' feature is active, showing a table with columns: BRANCH, TITLE, TYPE, PRICE, and PURDATE. The 'TYPE' column is selected, and a context menu is open, listing options: Communications, Database, Desktop, Graphics, Integrated, Spreadsheet, and Word Processing. A callout box labeled 'Filter by Form Feature' points to the 'Filter by Form' option in the 'Advanced' dropdown menu. Another callout box labeled 'Select Field Values' points to the 'TYPE' field in the table. At the bottom of the table, the 'Look for' and 'Or' buttons are visible. Callout boxes point to these buttons: 'Look for Tab: Set Filter Values' points to the 'Look for' button, and 'Click or Tab to set additional Filter Values' points to the 'Or' button.

BRANCH	TITLE	TYPE	PRICE	PURDATE
--------	-------	------	-------	---------

Look for Or
